Installing Google Chrome

On a Desktop (2023)

Step 1: Search for the application file

Open your Default Browser

All computers come with a web browser installed already.

For some, it's Mozilla Firefox, for others Safari, but for most, it's Microsoft Edge(formerly known as Internet Explorer)
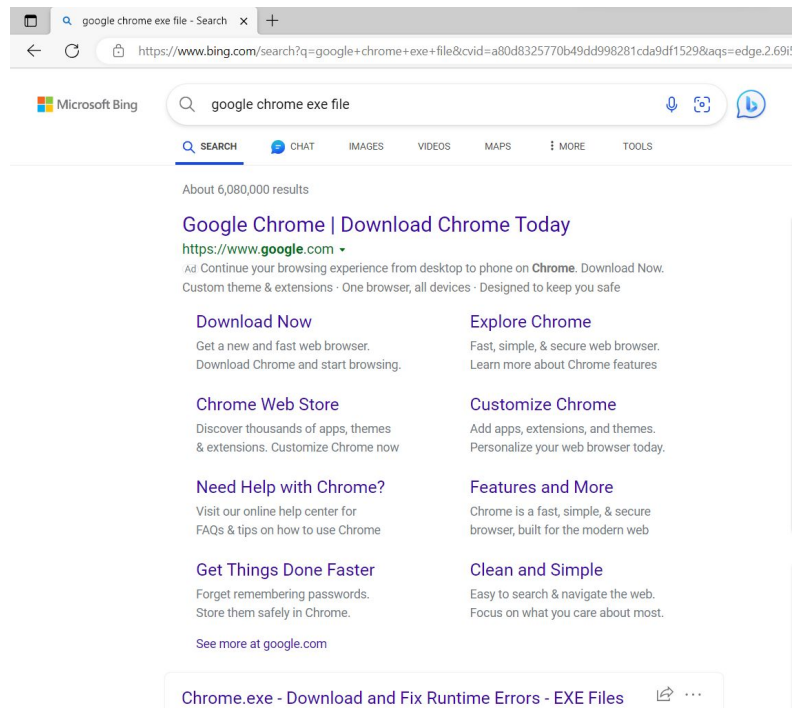

Search for 'Google Chrome exe file'

Click on:

Google Chrome | Download Chrome Today

Note: Only download application files from safe and official websites.

Step 2: Download the file

Google Chrome Homepage

The link you clicked should take you to the Google Chrome homepage.

On the homepage, there is a blue button saying 'Download Chrome'

Click the button to continue to the next step.

# Google Chrome Homepage

Step 3: Install Google Chrome

Open the file

File Name: ChromeSetup.exe

After you download the file, you should see a pop-up showing you your download.

Open the file.

Find the File

If you did not see the pop-up, you can find the file in your File Explorer

Find the File

Go to 'Downloads'

You will see the file ChromeSetup.exe, open it.

Pop-Up

When you see this pop-up, click 'Yes' and Google Chrome should automatically download and install.

When you click the 'close' button, your job is done.

You can now open Google Chrome and browse away!

Step 4: Happy Browsing!
